SV11 Brushbar Service Assy

In December last year TSB 4624 modified the Brushbar of SV11 Motorheads.

The modification was to the internal fitting of the Brushbar. Externally there was no visual change to the Motorhead. All changes were internal, to the drive assembly and to the Brushbar. These changes were made to ensure the continued flexibility of the supply chain.

- The original Motorhead has a metal drive assy, the modified Motorhead has a plastic drive assy.
- The Brushbar from the original Motorhead does not fit the modified Motorhead.
- The modified Brushbar will not fit the original Motorhead.
- The original Brushbar (967157-01) now becomes a Service Fit only Part – this should not be sent to Customers.
- The modified Brushbar (967157-02) is now to be offered in Service Workshops. Making this a Service Fit part. This will follow on future TSBs.

Stock/Implementation

- The modifications to the Motorhead happened about a year ago. This TSB simply releases the newer version of the Brushbar for Service Teams.
- There is no scrap as a result of this modification.
- These new Part Numbers will be made available immediately in systems for Supply Chain to order, stocks will then be available in warehouses following current lead times. Please be aware of lead times from Malaysia.

Systems

- Please update all relevant Systems to match the table above. Please also add notes to Dyson Central for this part, explaining that the Brushbars are not interchangeable.
